Klyrhon Miko R. Aurel

aurelklyrhonmiko@gmail.com | +63936 109 0745 | klyrhon.me | github.com/KlyrhonMiko

Software Engineer & AI Programmer

Skills

Frontend: React, Next.js, TypeScript, HTML, CSS, Tailwind CSS, GSAP, Framer Motion, Lenis, Three.js

Backend: Node.js, Express, FastAPI, Python

DevOps & Tools: Docker, Git

Mobile: Flutter, Dart, Riverpod

Databases: Supabase, PostgreSQL, SQLite

Education & Certifications

BS in Information Technology | Pamantasan ng Lungsod ng Pasig | *Expected 2027*

Harvard CS50: Intro to Computer Science & Artificial Intelligence | *2026*

freeCodeCamp: Responsive Web Design & Python Developer Certifications | *2026*

Cisco Networking Academy: Prompt Like an Engineer | *2026*

Amazon Web Services Training and Certification: AWS Educate Introduction to Generative AI | *2026*

Anthropic: Claude Code 101, Claude Code in Action, Agent Skills, Subagents | *2026*

DataCamp: Python Developer Associate | *2026*

Experience

Freelance | Full Stack Developer | 2025 - Present

- Built modular, responsive web apps for clients using **React**, **Next.js**, and **Tailwind CSS**.
- Architected robust backends (**Node.js**, **FastAPI**) and optimized load times via **code-splitting**.

Projects

Pars. | Live URL: pars.klyrhon.me

- Built a modern ATS-friendly resume builder utilizing **Next.js** and **TypeScript**, integrating a live preview editor that dynamically renders user data using **React PDF** for high-fidelity document generation.
- Engineered an AI-powered bullet point optimization engine leveraging **Groq** to provide instant, context-aware suggestions that enhance resume impact and readability.
- Implemented secure authentication and real-time data persistence using **Supabase**, coupled with a highly responsive, minimalist user interface styled with **Tailwind CSS**.

Koin | GitHub: github.com/KlyrhonMiko/koin | Live URL: koin.klyrhon.me

- Constructed an offline-first personal finance mobile application using **Flutter** and **Dart**, managing complex app state with **Riverpod** and ensuring reliable local data storage via **SQLite**.
- Integrated **Natural Language Processing (NLP)** and **voice recognition** to allow users to quickly and intuitively log expenses hands-free.
- Designed a modern, responsive UI utilizing **Flutter Material** for interactive data visualizations to give users clear, actionable insights into their financial habits.

Nulll | GitHub: github.com/KlyrhonMiko/nulll | Live URL: nulll.klyrhon.me

- Formulated an interactive algorithm visualization platform and code execution sandbox using **Next.js** and **TypeScript** to make complex data structures intuitive.
- Structured a client-side execution engine leveraging **WebAssembly (Pyodide)** in a background **Web Worker** to capture real-time stack frames and variable states without blocking the UI.
- Integrated step-by-step visual debugging and **dynamic data structure rendering** using **D3.js** and **Framer Motion** with granular execution controls.
